Heart rate

When entering the heart rate measurement screen, the bottom green light lights up and starts measuring. It will vibrate once complete in about 45 seconds. It will display the current heart rate and 24 hour curve.

Blood oxygen

When entering the blood oxygen measurement screen, the red light at the bottom lights up to start the measurement and the watch will vibrate once it completes in about 45 seconds. This measurement is based on PPG technology. The memory can store and display the last seven values.

warn:

Please consult your doctor before starting a new exercise program. Although smart watches can monitor real-time dynamic heart rate, they cannot be used for any medical purposes.

The bluetooth is not connected or cannot be connected

1. The bluetooth is not connected or cannot be connected.
2. Please restart the phone bluetooth and connect again.
3. Do not connect your mobile phone to other bluetooth device at the same time.

The measurement of heart rate/blood oxygen/ECG is inaccurate

1. General, it is caused by poor contact between the watch and the human body.
2. Please ensure that the sensor contacts the wrist well during measurement
3. Please keep your body still and the watch attached to your wrist tightly during measurement.

Sleep data is not accurate enough

1. Sleep monitoring simulates the status of natural sleep and getting up of human, and you should wear it as usual.
2. If you sleep too late or you do not wear the watch until you go to sleep, there may be some error.
3. It does not monitor the sleep data during daytime. The default time for sleep monitoring is from 9:30 in the evening to 12:00 at noon on the next day.
